

Our fluoropolymer molecules chemically bond with the stone, and each other, creating a barrier which repels both oil and water

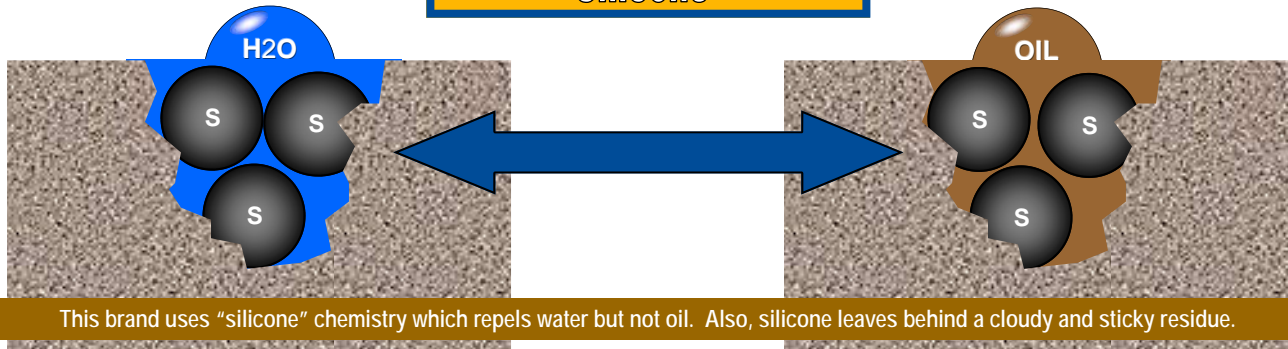

### Superior Stone Products Fluoropolymer Nano-Technology (compared to two leading brands)

#### COMPETITOR FluoroPolymer

This brand uses similar fluoropolymer chemistry but not all of them bond together. This allows both water and oil to penetrate.

#### Competitor Silicone

This brand uses "silicone" chemistry which repels water but not oil. Also, silicone leaves behind a cloudy and sticky residue.
