

Our fluoropolymer molecules chemically bond with the stone, and each other, creating a barrier which repels both oil and water

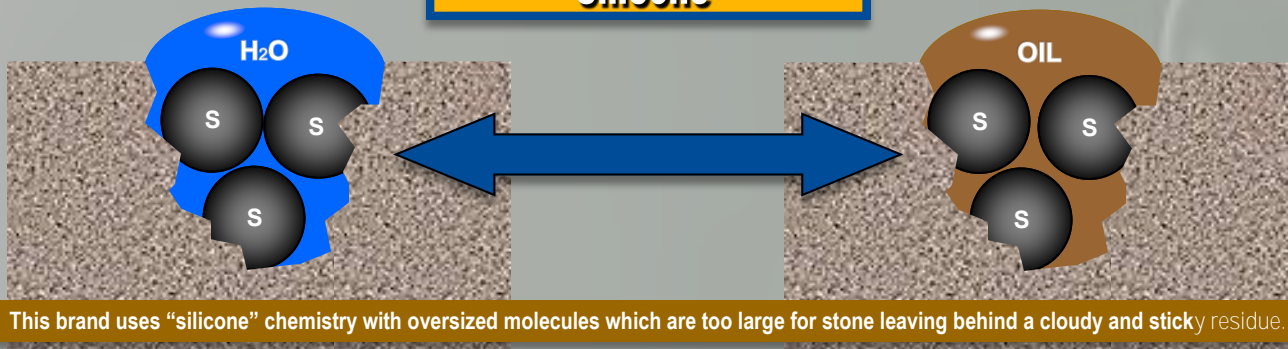

Superior Stone Products Fluoropolymer Nano-Technology (compared to two leading brands)

COMPETITOR FluoroPolymer

This brand uses similar fluoropolymer chemistry but not all of them bond together. This allows both water and oil to penetrate.

Competitor Silicone

This brand uses "silicone" chemistry with oversized molecules which are too large for stone leaving behind a cloudy and sticky residue.
